

Data Gran is a Machine Learning and AI Toolkit which develops effective marketing strategies and optimizes digital advertising spending across multiple channels. Their technology is able to optimize CPC by 50% and decrease customer churn by 10% by being incredibly user-friendly and well rounded. Data Gran has also been elected by JP Morgan and Endeavor as a high potential Startup.

### DRIPKIT COFFEE

Dripkit is a portable, single-use, mess-free way to brew the perfect cup of coffee. There's no grinding, no measuring, and no complicated gadgets. Dripkits are self-contained and pocket-sized, making them easy to use anywhere. Dripkit's coffee beans are sustainably sourced from small co-op farms in Guatemala and locally roasted in Brooklyn.

University Beyond is a recruitment and management platform for on-campus internships and brand ambassador programs. University Beyond hand selects top startups and well known brands to provide students with the best job opportunities nationwide. Their extensive network is ultimately able to create a talent funnel of rated and pre-trained future post-graduate hires.

RideKleen's KleenCare Technology is revolutionizing the car washing industry by providing a cloud based fleet management tool for customers. RideKleen's application will eliminate the hassle of traditional car washes by bringing state of the art cleaning technology straight to the customer.

Recoup Fitness is creating innovative and affordable products to become a leading force in muscle recovery and injury treatment and prevention. The Recoup Cold Rollers, a unique combination of Self Myofascial Release and Cryotherapy, allow for the body to recover faster and decrease the potential for injury.

Frenzy uses deep learning algorithms and computer vision to automatically identify and tag clothing products in photographs. It can then determine the exact Brand, SKU and locations where items can be purchased. Frenzy automatically identifies and tags clothing products in photographs. Using deep learning and computer vision, our software parses through each item in a web image to determine the exact brand, SKU, and where it can be purchased.

Aeronics's innovative healthcare solutions are putting patients first and changing oxygen storage for the better. The mediPOD (medical Portable Oxygen Device) is the world's first lightweight, low pressure, and portable oxygen device which uses microporous materials to store an hour's supply of oxygen in a 12 oz. sized container.

Päpr is the ultimate choice for organizations trying to go paperless. The simplicity and ease-of-use of Päpr helps organizational systems easily adopt the product into a workflow. Everything you would do on a regular sheet of paper can be done sustainably and beautifully on Päpr.

Yip Yap has created a mobile software platform that empowers parents to connect their kids safely to the people and content they love. Parents use an app to

manage their child's device and create an Individual Private Network of contacts, content and features. Kids can use Yip Yap's custom WiFi only device, Pipsqueak, or they can install the Yip Yap Kid's app on an old smartphone to talk, watch commercial-free YouTube, share content and more.

Nanno is a first-to-market solution solving a problem every parent has experienced -- the need for last-minute childcare. Nanno handles the entire transaction for busy parents,

from finding the caregiver to arranging the engagement to processing payment. The key element that makes Nanno work is trust; in order for parents to trust an on-demand service with their kids, they have to feel confident about the quality of the caregiver. Not only must all Nanno caregivers be background checked and have CPR certification, parents can also choose only caregivers who are connected to them through a friend or organization they trust using the proprietary algorithm.

Vudubox is a high-speed data storage appliance with the ability to automatically distribute data to the same appliances at other sites as well as cloud-based store.

### VUDU BOX

Additionally, it can attach directly to a client computer via high-speed local connections of Thunderbolt, USB3, or ethernet (either 1Gbor 10Gb) but can also operate as a NAS either in stand-alone mode or while attached to the client computer.
